ABOUT ME

I perceive myself as an individual equipped with formal training and possessing the requisite mindset to attain the goals I set for myself. Fortunately, I originate from a modest background, a circumstance I hold in high regard, fostering a heightened sense of diligence and determination beyond the ordinary. This commitment is evident in my professional trajectory, where, despite my age, I have amassed considerable experience through entrepreneurial ventures, successfully initiating and overseeing projects from inception.

EDUCATION

2014 - 2016 **Engineer Tec on Computer**
Don Bosco University

2017 **English**
English for Call Center Institute

2019 - 2023 **Software Engineer**
Tecnológica University

MAIN SKILLS

0 100

MAIN EXPERIENCE

Laravel Developer

Full Stack Developer – 10 years

I've had the chance to contribute to various teams and development firms, leveraging Laravel across diverse domains such as backend development, e-commerce, landing page creation, online gaming, tourism, human resources, and E-wallet systems. My proficiency extends to utilizing Laravel features including Eloquent, Passport, Blade templating, validators, MVC architecture, mail providers, Payment APIs, and more.

Java Developer

Full Stack Developer – 8 years

Commencing with freelance opportunities to acquire valuable experience, I transitioned to a role within a regional English-speaking company where I played a key role in migrating Symfony systems to Java. My responsibilities included working with technologies such as SpringBoot, Hibernate, iReport, Struts, JPA, and more. Collaborating closely with Angular, I also contributed to enhancing the security aspects of Java code, incorporating MVC, MicroService architecture, and various design patterns.

Javascript Developer

FullStack Developer – 8 years

I have extensive experience working with the MEAN and MERN stacks, utilizing various software architectures such as microservices, modular design, SOLID principles, and MVC. I have also integrated libraries like Tailwind, Bootstrap, Flowbite, and Materialize, alongside technologies such as Firebase, Redux, NestJS, Express, and JWT, to create a wide range of software systems.

Mobile Developer

Mobile Developer – 6 years

I initiated my journey into application development while working for a digital marketing company that provides development services. Self-taught, I dedicated myself to honing this skill, leading to the successful development and publication of multiple apps on both Android and iOS platforms.
